

SYSTEM FRICTION INSTITUTE

Longitudinal Observation Framework

Volume I · MOP-H ΩB

Official technical publication for friction phenotyping, minimal
perturbation, longitudinal prediction and atlas construction.

DOCUMENT	VERSION	STATUS	SERIES
SFI-DT-001	1.0	PROPOSED · ACTIVE	SFI Technical Library

INTERNAL TITLE

MOP-H ΩB

Operational instrument for longitudinal observation and minimal perturbation.

DOCUMENT IDENTITY

Document Identity

INSTITUTION System Friction Institute	CLASSIFICATION Official Technical Proposal
PRIMARY FUNCTION Observation before intervention	OUTPUT Hypothesis · Prediction · Longitudinal evidence · Atlas entry

DOCUMENT RULE No claim in this document is stronger than its evidence state. Observed, inferred, proposed and pending elements must remain separated.

PHASE 00

Problem Field

Why SFI observes friction instead of behavior.

Why Friction?

Behavior is visible only after the field has already constrained possible trajectories. SFI observes the restriction layer: the zone between declared intention, available energy, environmental resistance and actual movement.

Observation precedes intervention. Prediction precedes certainty. Evidence precedes authority.

The Primary Gap

The primary object is not suffering, success, failure or motivation. The primary object is the gap between what a system declares and what its trajectory can sustain.

Observation precedes intervention. Prediction precedes certainty. Evidence precedes authority.

Against Premature Intervention

Most failed interventions occur because the operator attempts to correct the visible behavior before identifying the energetic state, hidden gain and response friction of the field.

Observation precedes intervention. Prediction precedes certainty. Evidence precedes authority.

Institutional Position

SFI does not diagnose persons. SFI records friction configurations and tests whether minimal perturbations alter trajectory under longitudinal observation.

Observation precedes intervention. Prediction precedes certainty. Evidence precedes authority.

PHASE 01

Phenotypes of Friction

Observable configurations, not identities.

PHENOTYPE

Definition

A Fenotype of Friction is a relatively stable observable pattern of response under minimal perturbation. It is inferred from language, delay, bodily signal, contradiction, field response and post-intervention trajectory.

BOUNDARY

A phenotyping statement never says what a person is. It describes how a friction pattern is currently organized.

PHENOTYPE CARD

FP-001 · Observer Ahead

SIGNATURE High clarity, high isolation, delayed execution. Risk: mistaking observation for movement.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHENOTYPE CARD

FP-002 · Trajectory Diminished

SIGNATURE A prior trajectory loses emission without an externally visible cause. Risk: misreading silence as lack of value.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHENOTYPE CARD

FP-003 · Affective Control Fixation

SIGNATURE High energy directed toward recovering a relational response. EP_s high, EP_t blocked.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHENOTYPE CARD

FP-004 · Narrative Displacement

SIGNATURE The system protects itself by moving the conflict into a future statement.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHENOTYPE CARD

FP-005 · Execution Gap

SIGNATURE The system knows the required action but cannot initiate or sustain it.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHENOTYPE CARD

FP-006 · Field Saturation

SIGNATURE Too many active pressures make any new signal degrade before action.		EVIDENCE STATE Proposed · requires longitudinal contrast	
OBSERVE Recurring language, action delay, contradiction, field pressure.	DO NOT Convert the pattern into identity, blame or diagnosis.	PERTURBATION Select only after EP_estado and SSP are recorded.	

PHASE 02

Variable Architecture

State, process, context and result.

VARIABLE SHEET

IHG · Homeostatic Friction Load

LAYER	QUESTION	STATUS	RECORD
State	How large is the current friction?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

NTI · Signal Integrity

LAYER	QUESTION	STATUS	RECORD
State	How faithful is the system self-reading?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

LDI · Latency of Detection and Intervention

LAYER	QUESTION	STATUS	RECORD
State	How long between knowing and acting?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

EP_estado · Energy State

LAYER	QUESTION	STATUS	RECORD
Process	Activation, diminution or fixation?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

SSP · Primary Systemic Signal

LAYER	QUESTION	STATUS	RECORD
Sensor	What emerges when strategy is removed?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

OLC · Linguistic Collapse Operator

LAYER	QUESTION	STATUS	RECORD
Process	How does language organize the attractor?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

G0 · Hidden Gain

LAYER	QUESTION	STATUS	RECORD
Process	What does the system gain by not changing?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

FR · Field Response Friction

LAYER	QUESTION	STATUS	RECORD
Context	How much does context resist movement?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

EP_t · Trajectory Persistence Energy

LAYER	QUESTION	STATUS	RECORD
Result	Can a new trajectory be sustained?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

VARIABLE SHEET

CP · Persistence Coefficient

LAYER	QUESTION	STATUS	RECORD
Result	How many days did it hold?	Operational	Observed / Inferred / Pending

WHAT IT IS NOT

This variable is not a moral value, clinical label or personality trait. It is a field observation.

OBSERVE	DO NOT INFER	EVIDENCE REQUIRED
Language, delay, contradiction, field conditions.	Identity, intention, pathology.	Source, timestamp, operator note, longitudinal return.

PHASE 03

MOP-H ΩB

Protocol, questions and capture logic.

MOP-H QUESTIONS

Question Set

ID	QUESTION	MAPS
P01	What is not working right now?	IHG baseline
P02	Since when has it been like this?	LDI
P03	If you had to say it in one phrase, what would it be?	OLC
P04	What have you tried?	Response repertoire
P05	What did you expect would happen?	Prediction model
P06	What actually happened?	Reality delta
P07	How is this affecting you concretely?	Cost
P08	What have you left aside because of this?	Sacrifice
P09	If it continues, what breaks first?	UCAP
P10	What do you know you should do but are not doing?	NTI
P11	What is really stopping you?	Avoidance attractor
P12	What are you avoiding admitting?	L0 border
P13	Does what matters reflect in what you do?	Coherence
P14	Who else is inside this?	Field nodes
P15	What cannot change even if you want?	System limit
P16	What would you lose if this were resolved?	Hidden gain
P17	Is this yours or inherited?	Origin

Protocol Flow

Session 0 -> Variables -> EP_estado -> SSP -> Hypothesis -> Prediction ->
Perturbation -> 72h -> 7d -> 30d -> 90d -> Atlas

CORE RULE

Without a prediction registered before perturbation, the result is not predictive evidence. It is retrospective observation.

PHASE 04

Perturbation Typology

Prospective, retrospective, observational.

PERTURBATION CARD

Type I · Prospective Perturbation

Projects signal beyond the current field. Best for EP Activation.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PERTURBATION CARD

Type II · Retrospective Perturbation

Asks what changed. Best for EP Diminution.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PERTURBATION CARD

Type III · Observational Perturbation

Asks the system to record without acting. Best for EP Fixation.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PERTURBATION CARD

Type IV · Somatic Stabilization

Reduces noise before language. Best when SSP is bodily.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PERTURBATION CARD

Type V · Execution Micro-Commitment

One bounded action in 24h. Best when NTI is intact but LDI high.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PERTURBATION CARD

Type VI · Field Boundary

Reduces contextual friction before asking for change. Best when FR high.

USE WHEN	AVOID WHEN	EVIDENCE
State matches the field condition.	Operator seeks fast emotional resolution.	Prediction registered before application.

PHASE 05

Atlas Architecture

Cases, hypotheses, evidence and instrument mutations.

ATLAS

Atlas of Cases

Stores anonymized case entries and longitudinal outcomes.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

ATLAS

Atlas of Hypotheses

Stores predictions before perturbations.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

ATLAS

Atlas of Evidence

Stores source, timestamp, hash, transcript, screenshot or field note.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

ATLAS

Atlas of Instrument

Stores every mutation of the protocol itself.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

ATLAS

Atlas of Phenotypes

Stores friction phenotypes only after repeated contrast.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

ATLAS

Atlas of Perturbations

Stores perturbations and their predictive performance.

MINIMUM ENTRY Source · Timestamp · Evidence State · Return Tick	QUALITY RULE Uncertainty is preserved, never hidden.
---	--

PHASE 06

Evidence States

Observed, verified, degraded, uncertain, pending, archived.

EVIDENCE STATES

Documentary States

OBSERVED	Source and timestamp exist.	STATE
VERIFIED	Procedure, hash or reproducible evidence exists.	STATE
DEGRADED	Information failed but failure is itself recorded.	STATE
UNCERTAIN	Insufficient evidence declared explicitly.	STATE
PENDING	Waiting for longitudinal return.	STATE
ARCHIVED	Closed but preserved for historical return.	STATE

PHASE 07

State of Knowledge

What is stabilized, proposed, pending and unknown.

Current Knowledge Boundary

Stabilized	Predictions must be registered before perturbation.	ACTIVE
Stabilized	Longitudinal return is part of the instrument.	ACTIVE
Proposed	SSP may predict the effective perturbation type.	TEST
Proposed	EP_estado precedes EP_t measurement.	TEST
Open	Relationship between FR and CP requires more cases.	OPEN
Open	Cross-domain phenotype transfer remains unknown.	OPEN

The Institute does not conclude this volume. It places it under observation.

LIMITATIONS

Limitations

This instrument is not a clinical diagnosis, medical evaluation or substitute for professional mental health care. Its function is operational and research-oriented: to record friction patterns, formulate hypotheses and test minimal perturbations longitudinally.

All values, classifications and phenotypes in early cases must be treated as provisional until the Atlas contains enough contrast to evaluate predictive reliability.

APPENDIX A

Frictionnaut Workbook

Field sheets for operational use.
